The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, 5, 6 and 9 are rejected under 35 U.S.C. 102(a) as being anticipated by Japan (943) or Takata.

Japan (figs. 1 & 2) and Takata (figs. 17-D and 2A-D) teach providing a SAW electrode structure, a first pad layer, and a second pad/wiring layer over the first layers.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japan (943) or Takata in view of Europe (905) or Japan (816). Japan (943) and Takata teach the manufacturing method but don't provide an adhesion layer. However, each of Japan (816) and Europe (905) teach providing such a layer to increase the peel-off strength of the electrical structures. Thus, for at least this reason it would have been obvious to one of ordinary skill in the art to form an adhesion layer in Japan (943) or Takata prior to form an adhesion layer in Japan (943) or Takata prior to forming electrode and pad layers.
